

JOSH SMITH

I'm a developer who enjoys building useful software, solving problems, and helping people do their best work. I bring a hands-on approach, curiosity, and experience working closely with teams and customers to turn ideas into solutions that make their work easier.

PROFESSIONAL EXPERIENCE

Data Connector — Remote Position

Engineering Manager (May 2025 - October 2026)

- Led a team of developers by establishing structured code review processes, fostering technical growth, and aligning sprint commitments with broader business goals.
- Supported SOC 2 compliance through Vanta, alongside day-to-day engineering and customer support responsibilities.
- Developed and maintained integrations across SaaS APIs, databases, and cloud storage.
- Improved the shared Python connector runtime by resolving S3 pagination limits, authentication retry loops, transfer isolation, and batch ordering issues, with regression coverage.
- Delivered OAuth-scoped Model Context Protocol (MCP) tools for connector discovery, account access, and read-only data previews, enabling AI tools to access Data Connector.
- Investigated customer sync failures and data discrepancies using SQL and pipeline diagnostics; addressed filtering, mapping, and connector behavior.
- Coordinated application and API changes through development and UAT, validated automated checks, and prepared production release pull requests.
- Built website applications and other technology from the ground up (ref. dataconnector.com).

Xantie — American Fork, UT

Sr. Developer (May 2021 - May 2025)

Fisher Investments

- Developed data workflows using extensive SQL, Azure Data Factory, C# REST APIs, C# functions, and microservices.
- Worked in SCRUM optimized team and held sprints delivering code to production every 2 weeks
- Engineered and optimized ADF pipelines to automate end-to-end workflows, reduce pipeline failures, and cut error debugging time by more than 50%.
- Built automated cash transfer and securities processing flows using ADF, SFTP, and REST APIs with SOC 2 compliant logging.
- Implemented pipeline monitoring and alerting, and developed Python and Node.js integrations for data ingestion through SFTP and APIs

VIS AutoXLR8

- Developed a Testing and Automation tool for Data Validation
- C# and Asp.Net framework application
- Python runners and Razor Frontend frameworks

Woodside Homes

- Built a React Native application from scratch
- Released to App Stores
- The app accomplished the full end to end development tasks for a home on what needed to be done.

Software Engineer (October 2020 - May 2021)

Bluestep Client

- Bluestep platform build
- Javascript and Typescript

Scenic View Academy

- Full stack school attendance application
- React, SQL Server, Microsoft Web application

EARLIER ENGINEERING EXPERIENCE

- Smart Finger Apps | Software Engineer | March 2018 - October 2020
- Developed automated trading software with brokerage API integrations using Python, C#, .NET, Node.js, Angular, and SQL.
- Smart Wave Solar | Junior Software Engineer | March 2020 - October 2020
- Automated CAD workflows and state code submissions using Python and API integrations.

EDUCATION

BYU-Idaho — Rexburg, ID

Associates Degree, Applied Technology - December 2021

SKILLS & CERTIFICATIONS

- **Engineering leadership:** Technical project leadership, requirements gathering, code reviews, agile delivery, standups, release coordination, and customer support.
- **Data engineering:** ETL/ELT pipelines, data ingestion, transformation, synchronization, validation, mapping, filtering, and pipeline troubleshooting.
- **SQL and databases:** Advanced SQL, SQL Server, PostgreSQL, Snowflake, Oracle, and investigation of data discrepancies.
- **Backend development:** C#, .NET, Python, Node.js, REST APIs, microservices, serverless functions, and API management.
- **Frontend development:** React, Angular, JavaScript, HTML, CSS, and full stack web applications.
- **Cloud platforms:** AWS, Azure, Azure Data Factory, S3, and cloud application hosting.
- **AI and automation:** AI-assisted software development, automated connector development, AI and machine learning applications, and Model Context Protocol (MCP) integrations.
- **Testing and reliability:** Automated testing, regression testing, data-driven validation, QA automation, monitoring, alerting, and root cause analysis.
- **Security and compliance:** SOC 2 compliance support, Vanta, OAuth permissions and scopes, and compliance logging.
- **Integration technologies:** SFTP, JSON, XML, third-party APIs, financial services integrations, brokerage APIs, and JavaScript PDF applications.
- **Additional technologies:** Java, PHP, jQuery, Salesforce, and MVC.
- **Other Achievements:** Eagle Scout, COMPTIA+, Networking and Cloud Certifications, AWS Certifications
